Parts identification

Tips for best epilation results

The hair removal is not permanent, so from the 2nd use we recommend that you epilate the arms and legs about **once every two weeks**.

- Apply the epilator at a 90° angle to your skin. Always make sure that the appliance is in contact with your skin and press gently while moving it **slowly** against the hair growth.

- Massaging with a body puff may help to prevent ingrown hairs.
- Reddening might appear after use. A cool towel will help if you feel pain or there is a rash.
- If your skin gets dry after epilation, we recommend applying a moisture lotion two days after epilation.
- Make sure skin is clean before and after use.

Charging

For best performance, fully charge the appliance before use.

- You cannot operate the appliance while charging.
- Charging time differs depending on the rated voltage.

Charging time	220 V ~	Approx. 15 hours
	230 - 240 V ~	Approx. 12 hours

- The epilator can be used for approximately 25 minutes after charging. (This will differ depending on the temperature.)

Plug the AC adaptor into the epilator (a) and a household outlet (b).

- Recommended ambient temperature for charging is 0 - 35 °C. The battery may not charge properly or not at all under extreme low or high temperatures.

While charging

Red light appears.

After charging is completed

Red light glows and stays on until the adaptor is disconnected from a household outlet.

- The charging time may decrease depending on the charging capacity.
- To keep charging the battery will not affect battery performance.
- When charging the epilator for the first time or when it has not been in use for more than 6 months, the charging light may not turn on for a few minutes, or the operating time may shorten. Please charge it for more than 23 hours in such cases.

Before use

Best hair length for epilation

Trim your hair before epilating for the first time or if you have not epilated for a long time. Hair removal is easier and less painful when the hair is short.

Epilating

Areas suitable for epilation

The epilator can be used on the  areas.

Using the epilator on other areas may cause pain or skin trouble.

Areas not suitable for epilation

The epilator should not be used on the inner side of the upper arms and areas such as elbows or knees which are prone to sagging.

Dry epilation

Before epilating, wipe away water or sweat on your skin.

Slide the power switch [a5] to the 1 position and carry out epilation.

Wet/foam epilation

WET epilation (epilating after wetting the skin and epilator and then applying foam) makes the skin softer so is gentler to your skin when epilating.

1 Wet your skin.

2 Wet the discs and place a small quantity of liquid shower gel on the discs.

- Always use shower gel when wet epilating.
- Rinse any shower gel out of your hands.

3 Slide the power switch [B 5] to the 1 position and carry out epilation.

- Foam is created. Foam makes the epilator slide better, so you can move it fast.

- We recommend using the appliance in an ambient temperature range of 0 - 35 °C. If used outside this range, the appliance may stop operating.

<Epilating legs or arms>

Upwards from the bottom of the leg.
Inwards from the outside of the arm.

Cleaning

- Always clean the frame and discs after use to keep them in a hygienic state.
- Switch off and unplug the appliance before cleaning.
- Take care not to damage the frame during cleaning.

Dry cleaning

1. Lift the frame upward while holding the frame release rib [A 1].
2. Clean the epilation head [A] with the cleaning brush [O].

Wet cleaning

1. Wet the discs and apply liquid hand soap to them.
2. Turn the switch on and then foam is created.
3. Wash the head with water to wash out hair.
 - Do not use hot water.
 - If soap is not completely washed away, then a white deposit can accumulate and prevent the discs from moving smoothly.

4. Turn the switch off, wipe the appliance with a dry cloth and dry it well.
